

# ZONES OF THE NET

(Setting Zones)

The net is divided into a symmetrical system of zones  
Passing target is zone 7

In this system the height of the set is designated by the second digit; the zone that the set is in by the first digit.

e.g A 23 set will be in zone 2, 3 feet above the net at the peak of its arc.  
A 68 set will be in zone 6, 8 feet above the net at the peak of its arc.

Note: 1. When 0 is the second digit, the set is a normal high set  
2. When 9 is the second digit, the set is a super high set

e.g 10 is a regular set in zone 1  
99 is a super high set in zone 9
